

Congratulations, you are now working with KeyKegs, the leading, next-generation keg. Please allow us to explain what's different compared with traditional steel kegs?

KeyKeg will keep the beverage fresh for several weeks after broaching.

With the traditional steel kegs that's much shorter. Besides that, beverage from a KeyKeg will taste better. Why? Simply because no CO₂ will come into contact with the product.

KeyKeg weighs about 80% lighter when empty. Just experience the difference between an average steel keg and a lightweight KeyKeg. You'll like it!

KeyKeg can be dispensed with air as well. A simple cheap air compressor will do the job. No dangerous, polluting and expensive CO₂ bottles anymore.

No more deposits to pay. There are no deposits on KeyKegs. More liquidity for your company!

As the KeyKeg is a one-way keg, it can be easily recycled after use. You suddenly have much more space in your store.

On average you get at least two to three more glasses out of a KeyKeg.

No foaming when the keg is almost empty. Besides that, flat or overcarbonated beer is something of the past. This means less waste and more profit!

KeyKeg proves to be much more environmentally friendly than steel kegs, certainly on longer distances.

That's only logical since KeyKegs eliminate the return transport, the polluting washing sequences and allows 25% extra beverage to be carried per transport. KeyKegs are totally recyclable and comply worldwide to the strictest environmental regulations.

KeyKegShop.com

"Easy ordering from our webshop!"

KeyKeg users can order 24/7 all necessary equipment on www.keykegshop.com. All supplies for dispensing, filling and instruction can be ordered here at the lowest costs.

Foaming

Over-carbonation is no issue anymore. The propellant gas will not come in contact with your beer during dispensing.

"What can you do if beer has too much foam?"

You can cool the keg or increase the dispense pressure. Find out more in our [Foaming Instruction Video](#).

For more instruction videos see www.keykeg.com

KeyKeg advantages

- Shelf life after broaching is several weeks
- Lightweight and easy to lift
- No keg deposit
- Can be dispensed with CO₂/N₂ or air
- No storage of empty KeyKegs
- More beer out of a KeyKeg: no remains and no excessive foaming
- Sustainable
- Always the right dispensing pressure: no over-carbonation or flat beer anymore
- Available in 10L, 20L and 30L
